

BEZZOTECH™

CoSign® Connector for Oracle® WebCenter Content

Standard and secure digital signatures for WCC

Organizations are increasingly investing in Enterprise Content Management and Business Process Management to enhance their operations, increase efficiencies and ensure compliance, not to mention the hopes of cutting costs. Unfortunately unless

they are also implementing a compliant and standards based digital signature solution that is integrated into the enterprise, their overall ROI on these investments is greatly reduced due to the inefficiencies of having to print, sign, and scan legal documents

81% of companies that implemented digital signatures reached ROI in 12 months or less. 25% reached ROI in three months or less

— AIIIM Survey, 2013. See www.goo.gl/4qDBG

Bezzotech's CoSign Connector for Oracle WebCenter Content

Bezzotech's CoSign Connector for Oracle WebCenter Content addresses these inefficiencies by enabling users to digitally sign documents quickly and securely through familiar and intuitive menus right from the enterprise content repository.

The CoSign Connector for Oracle WebCenter Content is highly configurable and leverages all of the WebCenter Content repository features such as workflow, revision control, and content security providing the ability to meet all of your business requirements and repository configurations.

Advantages

- **Secure integration of digital signature functionality for WebCenter Content**
- **Legal, compliant, verifiable solution**
- **Easily and affordably eliminate expensive print/sign/scan cycles**
- **Increase ROI and ensure data integrity**
- **Reduce the cost of compliance and reduce the risk of noncompliance**
- **Minimize the cost of training and support**
- **Flexible deployment, with support provided by Bezzotech**
- **Backed by ARX**
