

WCM LOCALIZATION SUITE

KEY FEATURES AND BENEFITS

KEY FEATURES

- Manages multiple languages/locales via one website!
- Seamless integration with WCM

KEY BENEFITS

- Ease of multi-site management
- Flexibility
- Simplifies translation process

Bezzotech's WCM Localization Suite works in conjunction with Oracle's Web Content Management system (Universal Content Management and Site Studio) to enable easy management of multiple websites. This includes the translation of content, as well as text fragments and code.

WCM Localization Suite adds supplemental functionality to your UCM/WCM environment including:

- Ease of use for multi-site management, especially for multi-national organizations needing to maintain their websites in multiple languages and locales.
- Flexibility: content is fully managed in the UCM repository, and regular UCM workflows are used. This enables easy portability to other UCM repositories and related applications.
- Checks and balances to ensure that languages/translations are managed together.
- Seamless integration with UCM/WCM. All screens and menu items are part of the standard Graphical User Interface. All administrative functions are also seamlessly integrated with the existing administrative interface.
- Sold as a stand-alone "plug-in" to UCM/WCM

Implemented as a UCM Component, WCM Localization Suite can easily be installed and configured using standard UCM/WCM administration tools.

Your translations are protected with UCM workflows to ensure unauthorized changes are blocked, and that the translation process is followed.
